

# GENESIS DAO COUNCIL

*Sovereign Governance Charter, 100-Seat Hard Cap, Two-Phase Rollout, 3X Cap & Automated Vacancy Re-Allocation Engine*

|                          |                            |                               |                            |
|--------------------------|----------------------------|-------------------------------|----------------------------|
| MAXIMUM COUNCIL SEATS    | CAPITAL ENTRY              | EARNINGS CAP                  | RE-TOPUP WINDOW            |
| <b>EXACTLY 100 SEATS</b> | <b>\$300 (0 REFERRALS)</b> | <b>STRICTLY 3X (\$900.00)</b> | <b>48 HOURS (\$300.00)</b> |

## 1.0 GENESIS COUNCIL FOUNDING CHARTER

The Genesis DAO Council represents the supreme governance and foundational liquidity tier of the Equora Protocol. Comprising exactly 100 sovereign seats, the Council was established to align high-conviction ecosystem architects, institutional capital partners, and senior community leaders with the long-term governance and economic stability of the platform.

Each Council seat is formalized through an immutable Soulbound proof-of-seat credential recorded directly to the member's self-custody Web3 wallet. The Council operates under a strict **1-Seat 1-Vote** consensus framework, possessing equal voting authority over treasury allocations, smart contract parameter optimizations, and ecosystem grants.

## 2.0 TWO-PHASE STAGED LAUNCH ROADMAP

To ensure orderly council formation and establish robust structural liquidity prior to public network release, the smart contract enforces an immutable two-phase launch schedule:

| PHASE 1: EXCLUSIVE GENESIS WINDOW (DAYS 1 TO 21)                     | PHASE 2: GLOBAL MATRIX RELEASE (DAY 22 ONWARD)                  |
|----------------------------------------------------------------------|-----------------------------------------------------------------|
| • <b>Exclusive Access:</b> Only the Genesis DAO Council is open.     | • <b>Global Public Launch:</b> Standard \$30 matrix goes live.  |
| • <b>Matrix Hidden:</b> Standard \$30 slots locked & invisible.      | • <b>Mass Participation:</b> Community builders enter globally. |
| • <b>Open Buy-In:</b> Direct purchase at \$300 (0 referrals).        | • <b>35% Treasury Inflow:</b> All matrix volume feeds Council.  |
| • <b>Founding Queue:</b> Early leaders accumulate initial dividends. | • <b>40% Leadership Pool:</b> Monthly accumulation starts.      |

### 3.0 SEAT ACQUISITION & OPEN BUY-IN ELIGIBILITY

Genesis Council enrollment is transparent, non-custodial, and cryptographically deterministic:

- **Hard-Capped Scarcity:** The contract enforces a strict ceiling of exactly 100 seats (`maxSeats = 100`). Once Seat #100 is registered, no additional seats can ever be created.
- **Capital Entry:** A single entry fee of \$300.00 USDT.
- **Zero Referral Requirement:** Enrollment is 100% open buy-in. Qualified leaders and capital partners can acquire a council seat without any prior recruitment or network activity.
- **Permanent Soulbound Credential:** Bound directly to the participant's Web3 wallet address, certifying authentic council authority.

### 4.0 THE GENESIS QUEUE DISTRIBUTION MATHEMATICAL MODEL

Every incoming \$300 council deposit is partitioned and pushed directly to earlier council members in the exact same transaction block. The protocol retains 0.00% administrative fee. Distribution follows the deterministic formula:

#### GENESIS QUEUE DISTRIBUTION FORMULA

$$\text{\$} \text{ ext{Payout per Existing Member}} = \frac{\text{\$}300.00}{\{N - 1\}}$$

Where  $N$  represents the sequential seat index of the incoming registrant ( $2 \leq N \leq 100$ ).

Table 2 illustrates the distribution mechanics across sequential registration intervals:

| REGISTRANT SEAT INDEX (\$N\$) | CAPITAL DEPOSIT | NUMBER OF PRIOR RECIPIENTS (\$N - 1\$) | PAYOUT PER PRIOR MEMBER | TOTAL DISTRIBUTED |
|-------------------------------|-----------------|----------------------------------------|-------------------------|-------------------|
| Member #2                     | \$300.00        | Member #1 (1 member)                   | \$300.00                | \$300.00 (100%)   |
| Member #3                     | \$300.00        | Members #1 & #2 (2 members)            | \$150.00                | \$300.00 (100%)   |
| Member #6                     | \$300.00        | Members #1-#5 (5 members)              | \$60.00                 | \$300.00 (100%)   |
| Member #11                    | \$300.00        | Members #1-#10 (10 members)            | \$30.00                 | \$300.00 (100%)   |
| Member #21                    | \$300.00        | Members #1-#20 (20 members)            | \$15.00                 | \$300.00 (100%)   |
| Member #51                    | \$300.00        | Members #1-#50 (50 members)            | \$6.00                  | \$300.00 (100%)   |
| Member #76                    | \$300.00        | Members #1-#75 (75 members)            | \$4.00                  | \$300.00 (100%)   |
| Member #100                   | \$300.00        | Members #1-#99 (99 members)            | \$3.03                  | \$300.00 (100%)   |

## 5.0 THE STRICT 3X (\$900) EARNINGS CAP & 48-HOUR RE-TOPUP WINDOW

A critical architectural defense against passive stagnation is the strict **3X Earnings Cap**. In conventional protocols, early founding members extract liquidity indefinitely without participating in community maintenance. Equora eliminates this vulnerability:

- **3X (\$900.00 USD) Ceiling:** Every \$300 council seat is restricted to a maximum cumulative payout of \$900.00 USD from combined Genesis Queue disbursements and continuous 35% Treasury Pool shares.
- **48-Hour Countdown Window:** The moment a council seat reaches \$900.00 in cumulative earnings, the contract automatically triggers an immutable 48-hour countdown timer.
- **Re-Topup Execution:** To preserve their seat, the member must deposit a **\$300.00 USD re-topup** within the 48-hour window. This deposit resets their cumulative earnings counter to \$0.00, unlocking an additional \$900.00 earning capacity.
- **Treasury Reinjection:** Exactly 100% of the \$300 re-topup fee is injected into the queue and Ecosystem & DAO Pool (35%), distributing liquidity directly to other active Genesis DAO Seat holders.

## 6.0 AUTOMATED VACANCY SCAN ENGINE (SEAT 1 TO 100)

If a council member fails to deposit the \$300 re-topup within 48 hours of hitting their 3X cap, the smart contract marks their position as **vacant**. This initiates the automated vacancy re-allocation engine:

```

[Incoming Registrant calls joinDAO() with $300]
      |
[Scan Loop: Index i = 1 to 100]
      |
+--- Is Seat i Vacant? ---+
      |                     |
[YES]                       [NO]
      |                     |
[Assign Seat i to User]     [Increment i++]
[Prime Low Index Filled]   [Check next index]

```

When a new applicant calls `joinDAO()`:

1. The contract executes a deterministic scan iterating sequentially from **Seat Index 1 through 100**.
2. The incoming member is automatically assigned to the **lowest vacant seat index** available.
3. This guarantees that high-priority foundational seats (e.g. Seat #4, Seat #12) are continually re-energized with fresh active capital, preventing structural dormancy.
4. If no prior seats are vacant, the applicant claims the next sequential seat up to the 100-seat ceiling.

## 7.0 SUMMARY OF COUNCIL GOVERNANCE PRIVILEGES

Genesis DAO Seat holders exercise sovereign oversight over the Equora Protocol:

- **35% Ecosystem & DAO Pool Stream:** Direct, push-settled yield derived from every matrix activation globally.
- **1-Seat 1-Vote Governance:** Voting rights on smart contract parameter updates, third-party audits, and ecosystem expansion proposals.
- **Permanent Network Seniority:** Priority placement within global network infrastructure.
