

GOVERNANCE SPECIFICATION • 100 SEATS MAXIMUM • BY LEXVRA

Genesis DAO Council

100 sovereign founding seats governing the Equora protocol. Fixed \$300 USDT entry, automated Genesis Queue payouts, and a permanent 35% share of global matrix volume.

SUPPLY: 100 Seats	ENTRY: \$300.00 USDT (0 Referrals)	CASH FLOW: Queue + 35% Global Matrix	CYCLE CAP: 300% (\$900.00)
-------------------	------------------------------------	--------------------------------------	----------------------------

SOVEREIGN PROOF-OF-SEAT BADGE • 100 SEATS

Genesis DAO Council Overview

The sovereign governing body and primary liquidity beneficiary of the Equora protocol.

Code-Enforced Governance

No management board, corporate entity, or custodial bank accounts. Every seat assignment, dividend distribution, and voting right executes autonomously through non-upgradable Solidity contracts deployed under LEXVRA.

Autonomous Smart Contract Execution

Fixed 100-Seat Supply

The council is hardcoded to exactly 100 verified on-chain positions (`maxSeats = 100`). Seat holders direct protocol parameter updates, vote on grants, and hold permanent dividend rights over platform volume.

Immutable Cryptographic Scarcity

Dual Cash Flow Streams

Seat holders earn concurrently from two sources: (1) Instant peer-to-peer queue payouts from incoming seat buyers (\$300 Queue), and (2) A continuous 35% dividend from all global retail matrix boards worldwide.

Concurrent Revenue Settlement

Core Council Specifications

Three immutable parameters governing council onboarding, capital requirements, and qualification.

100 Seats

Fixed Supply Cap

`maxSeats = 100` is an immutable smart contract constant. No 101st seat can ever be created or minted under any circumstance.

Hardcoded on-chain constant

\$300.00

Fixed Entry Capital

Single deposit in USDT. Exactly 100% of the deposit routes directly to earlier active seat holders via the deterministic Genesis Queue formula.

100% peer-to-peer distribution

0 Referrals

Open Qualification

Unlike the retail matrix (which requires 2 active direct referrals to unlock higher slots), council participation requires zero downline or referral network.

Zero team-building prerequisite

Two-Phase Protocol Deployment Sequence

Structured launch schedule establishing decentralized governance prior to public retail onboarding.

PHASE 1 • DAYS 1 TO 21

Genesis Governance Window

- **Exclusive DAO Access:** Only the 100 Genesis Council seats are open for onboarding.
- **Retail Matrix Inactive:** The standard \$30 matrix remains locked during Phase 1.
- **Founding Liquidity:** Up to \$30,000 in early capital circulates peer-to-peer among seat holders via the queue.
- **Infrastructure Finalization:** Council members verify contracts, establish voting procedures, and secure prime seniority.

Seniority Advantage: 21 days of exclusive protocol governance

PHASE 2 • DAY 22 ONWARD

Global Matrix Activation

- **Public Retail Launch:** The 12-slot matrix opens globally starting at the \$30 entry tier.
- **Worldwide Matrix Velocity:** Board completions scale across international communities.
- **Pool 1 Dividend Activation:** 35% of all vault inflows begin daily streaming to active council seats.
- **Perpetual Cash Flow:** Council holders earn continuous passive dividends from worldwide matrix activity.

Global Expansion: Continuous 35% dividend distribution

Dual-Source Revenue Model

Council seats generate cash flow concurrently from internal seat registrations and global matrix volume.

REVENUE STREAM 1

Genesis Queue Distributions

- **Capital Source:** Incoming \$300 deposits from new seat buyers and re-topping members.
- **Mathematical Rule:** \$300 is divided equally among all prior active seats: $\$300 / (N - 1)$.
- **Settlement Speed:** Push payouts executed on-chain directly to member wallets on each block.
- **Capital Recovery:** Early seats achieve 100% capital recovery upon the very next seat registration.

Direct Peer-to-Peer Onboarding Queue

REVENUE STREAM 2

35% Global Matrix Dividend

- **Capital Source:** Nodes 4, 5, and 14 from every completed matrix board worldwide (\$90/board on Slot 1).
- **Pool Allocation:** Exactly 35% of all vault inflows route to Pool 1 (Ecosystem & DAO Pool).
- **Distribution:** Split pro-rata on a daily settlement cycle among active council seats.
- **Global Scope:** Yield accrues from boards completed across all international regions without team sponsorship.

Perpetual 35% Share of Worldwide Matrix Turnover

Genesis Queue Settlement Formula

Algorithmic equal-split distribution executed on-chain for every council seat entry.

Deterministic On-Chain Formula

Each time a new seat is claimed or an active member re-topups, 100% of the \$300 USDT deposit is divided equally across all prior active seats:

$$\text{Payout per Prior Seat} = \$300 \div (\text{Seat Index} - 1)$$

Zero intermediary deductions. 100% of deposit capital distributes immediately into prior seat holders' wallets on-chain.

Sample Distribution Progression

- **Seat #2 Joins:** Transfers \$300.00 to Seat #1 → **100% capital recovery on 1st join**
- **Seat #3 Joins:** Transfers \$150.00 each to Seats #1 and #2
- **Seat #6 Joins:** Transfers \$60.00 each to Seats #1 through #5
- **Seat #11 Joins:** Transfers \$30.00 each to Seats #1 through #10
- **Seat #21 Joins:** Transfers \$15.00 each to Seats #1 through #20
- **Seat #51 Joins:** Transfers \$6.00 each to Seats #1 through #50

Queue Distribution Schedule Across Seats 1 to 100

Deterministic payout amounts per active seat as council membership expands toward capacity.

INCOMING SEAT INDEX	DEPOSIT AMOUNT	RECIPIENT GROUP	PAYOUT PER PRIOR SEAT	TOTAL DISTRIBUTED
Seat #2	\$300.00	Seat #1 only	\$300.00 (100% Capital Recovery)	\$300.00
Seat #3	\$300.00	Seats #1 & #2	\$150.00 each	\$300.00
Seat #6	\$300.00	Seats #1 to #5	\$60.00 each	\$300.00
Seat #11	\$300.00	Seats #1 to #10	\$30.00 each	\$300.00
Seat #21	\$300.00	Seats #1 to #20	\$15.00 each	\$300.00
Seat #51	\$300.00	Seats #1 to #50	\$6.00 each	\$300.00
Seat #100	\$300.00	Seats #1 to #99	\$3.03 each	\$300.00

Seats remain actively queued until accumulating the full \$900.00 (300%) cycle cap across queue distributions and matrix pool dividends.

The 4 Automated Protocol Pools Architecture

In Equora's 14-node single-leg matrix, Nodes 3, 6, 8, 9, 11, and 12 deliver direct cash (\$180/board on Slot 1) to the board owner. Meanwhile, **Nodes 4, 5, and 14 (\$90 total per Slot 1 board)** route automatically into EquoraVault.sol to fund the 4 Automated Protocol Pools:

POOL 1 • 35%

Ecosystem & DAO Pool

Distributed daily among active Genesis DAO Council seat holders. Core beneficiary of global matrix volume.

\$31.50 per Slot 1 board

POOL 2 • 40%

Salary to Community

Settled monthly on the 11th across 4 leadership rank tiers (Alpha, Prime, Elite, Crown) with rank stacking.

\$36.00 per Slot 1 board

POOL 3 • 15%

Level Rewards

Instant milestone cash bonuses (10%, 15%, 25%, 50%) paid immediately into member wallets upon rank achievement.

\$13.50 per Slot 1 board

POOL 4 • 10%

Magic Blind Box

91-day (3-month) smart contract lock in live TROB
Coin, releasing predictable staking yield upon maturity.

\$9.00 per Slot 1 board

Matrix Progression & Automated Slot Upgrades

Nodes 4 & 5 reserve 2× slot cost to fund the 4 pools and automatically activate the next tier on Cycle 1.

Each slot tier doubles the entry requirement of the prior tier. In every slot, **Node 4 + Node 5 accumulate exactly 2× the slot price**. Both node deposits route to the 4 Automated Protocol Pools, and Node 5 simultaneously triggers an automated smart contract call unlocking the next slot tier for **\$0 out-of-pocket capital** on Cycle 1:

SLOT TIER	SLOT PRICE	NODES 4 & 5 RESERVE (AUTO-UNLOCKS NEXT SLOT)	TOTAL TO 4 POOLS (NODES 4, 5, 14 TOTAL)	35% TO DAO POOL (PER BOARD CYCLE)	DAO INFLOW (100 CYCLES) (AGGREGATE VOLUME)
Slot 1	\$30	\$60.00 → Unlocks Slot 2	\$90.00	\$31.50 per board	\$3,150.00
Slot 2	\$60	\$120.00 → Unlocks Slot 3	\$180.00	\$63.00 per board	\$6,300.00
Slot 3	\$120	\$240.00 → Unlocks Slot 4	\$360.00	\$126.00 per board	\$12,600.00
Slot 4	\$240	\$480.00 → Unlocks Slot 5	\$720.00	\$252.00 per board	\$25,200.00
Slot 6	\$960	\$1,920.00 → Unlocks Slot 7	\$2,880.00	\$1,008.00 per board	\$100,800.00
Slot 12	\$61,440	\$122,880.00 • Pinnacle Tier	\$184,320.00	\$64,512.00 per board	\$6,451,200.00

As network participants progress into higher slots, daily pool cash flow scales geometrically across all active council seats.

300% (\$900) Programmatic Cycle Limit

Enforcing capital circulation and preventing static extraction through programmatic cycle thresholds.

Programmatic Cycle Cap

Each \$300 seat deposit is capped at a cumulative payout of **\$900.00 USDT (300% / 3.0X return)** across queue distributions and matrix pool dividends.

Once \$900 is reached, payouts pause and an on-chain 48-hour re-topup timer begins. This prevents passive capital stagnation and ensures continuous liquidity velocity for all 100 seats.

300% Maximum Gross Distribution Threshold

\$900.00

Capital Return per Round

- **Seat Deposit:** \$300.00 USDT
- **Gross Cycle Payout:** \$900.00 USDT
- **Net Retained Capital:** **+\$600.00 USDT net gain per cycle**
- **Cycle Action:** Retain \$600 profit and submit a \$300 re-topup within 48 hours to reload.

+\$600.00 USDT Net Profit per Closed Round

48-Hour Renewal Lifecycle

Three on-chain state transitions governing council seat renewal and continuous earning qualification.

STAGE 01

Cap Threshold Reached

The instant cumulative payouts reach \$900.00 USDT, EquoraDA0.sol logs the completion timestamp and initiates the 48-hour re-topup countdown.

Countdown Timer Activated

STAGE 02

\$300 Re-Topup Deposit

The member retains \$600.00 USDT net profit and executes a \$300.00 USDT renewal transaction from their connected wallet before the 48-hour window expires.

Profit Retained & Cycle Reloaded

STAGE 03

Next Cycle Activated

Payout accumulator resets to \$0. The member preserves their original seat seniority index and unlocks eligibility for their next \$900.00 round.

Seniority Preserved & Earning Restored

Seat Forfeiture & Re-Allocation Protocol

Preventing stagnant capital: inactive seats are programmatically revoked and released to waiting participants.

48-HOUR TIMER EXPIRY

Seat Marked **VACANT** by Contract

- If 48 hours elapse without a \$300 re-topup, the seat state is programmatically updated to **VACANT**.
- The previous holder keeps all \$900.00 cash previously received, but forfeits council membership.
- The associated proof-of-seat badge is burned on-chain.
- The vacant seat is made immediately available for registration by waiting market participants.

Programmatic Forfeiture Enforcement

OPEN MARKET ACQUISITION

Immediate Open Market Access

- Participants who missed the initial 100-seat launch can acquire forfeited seats on-chain.
- Whenever a member fails to re-topup, their position becomes claimable in real time.
- Any eligible participant can deposit \$300 USDT to claim the vacant seat instantly.
- Deterministic execution: The first valid transaction confirming on-chain secures the position.

Fair On-Chain Claim Mechanism

Sequential Vacancy Assignment Algorithm

Smart contract logic: incoming buyers inherit the lowest open seat index automatically.

STEP 01

Deposit Submission

A participant triggers the claim function on EquoraDAO.sol and submits a \$300.00 USDT deposit.

Transaction Signed & Broadcast

STEP 02

Sequential Array Scan

The contract executes a deterministic scan across indices 1 through 100 to locate the first position marked VACANT.

Autonomous Priority Search

STEP 03

Seniority Assignment

If Seat #7 was vacated, the applicant receives Seat #7, immediately inheriting senior queue placement ahead of seats #8–100.

Inherited Seniority Position

Decentralized Governance Framework

Equal-weight voting: 100 total votes in existence, exactly 1.0% voting authority per seat.

Protocol Parameters

Vote on operational constants: epoch durations, salary settlement dates, queue re-topup windows, and multi-collateral stablecoin integrations (USDC, DAI).

Protocol Parameter Voting

Ecosystem & Grants

Authorize developer grants, community growth budgets, localized event sponsorships, and regional expansion programs from protocol reserves.

Treasury & Growth Mandates

Security & Audits

Commission independent smart contract security audits, formal verification reviews, and white-hat bug bounty allocations.

Independent Security Verification

Sovereign Proof-of-Seat Badge

Non-transferable cryptographic credential certifying verified council membership.

GENESIS DAO COUNCIL BADGE
TOKEN ID = SEAT ID (1 TO 100)

Soulbound Identity Architecture

Unlike speculative tokens traded on secondary marketplaces, council badges are **cryptographically locked to the participant's self-custodial wallet address**.

The badge cannot be transferred, sold, or extracted. It serves as permanent on-chain verification of membership for Seats #1 through #100.

Smart Contract Guarantees

- **Non-Transferable:** All transfer invocations revert permanently at the bytecode level.
- **Deterministic 1:1 ID:** Badge token ID strictly corresponds to Council Seat Index (1 to 100).
- **Voting Authorization:** Only the wallet address holding the badge can sign governance votes.
- **Automated Lifecycle:** Minted upon confirmed \$300 deposit; burned on-chain if 48h re-topup expires.

ONBOARDING PROTOCOL • 100 SEATS MAXIMUM

Join the Genesis DAO Council

1. Connect Self-Custodial Wallet: Access the Equora.Fi portal using your preferred Web3 client.
2. Submit \$300 USDT Deposit: Claim an open council position during the Phase 1 window (0 referrals required).
3. Receive Council Badge: Enter the Genesis Queue and activate your permanent 35% global matrix dividend allocation.

PROTOCOL: Equora.Fi Powered by LEXVRA

CAPACITY: Exactly 100 Seats Forever

GENESIS DAO COUNCIL • \$300 ENTRY
